NIPPON FLAVOUR KOGYO CO., LTD.

Flavours are Energy

Since the company's founding in 1912, we have taken "Respect the Divine and Love People" as our management ideal and focused on research and development of various food additives, with a focus on citrus fragrances. In 2012, we celebrated the 100th anniversary of the company's founding.

We all casually consume soft drinks, snacks, and desserts in our daily lives, and flavours are an essential part of many of these processed food products. However, the properties of flavours differ from seasonings, and they are also different from things like wheat flour and eggs that make up the body of food products.

Legally speaking, they are considered foodstuffs additives, but this description is insufficient for understanding flavours. In that case, what kind of role do flavours play? We consider flavours to be one kind of energy. In order to spread a product in the market, it needs a unique characteristic to be its driving force. Flavours are essential for giving products this uniqueness.

At Nippon Flavour Kogyo, we use the experience and results we've achieved through our over 100-year history in our day-to-day business, providing safe and high-quality products which also meet the diverse needs of our customers. In addition, we will continue to improve our technology to create products with even higher quality for the next 100 years and are also active as a company which can contribute to society.

Delivering the aromas of the world with flavourings made from carefully-selected materials.

Searching out and carefully selecting materials from all over the world, our work starts from the picking out new aromas to add to foodstuffs. Japan's flavouring and aroma industry has expanded globally. Through direct supply of materials from their local production areas, we deliver distinct and unique world aromas to our customers.

Delivering a consistent product with a high level of value-added

Creating flavours that meet diverse market needs while maintaining strict safety standards. Starting from foundational research, our products then pass through aroma adjustment and manufacturing, with strict quality control at each step. In this way, we provide products that our customers can use with peace of mind.

Speed increased by the Tokyo Development Centre

By opening the Tokyo Development Centre in 2013, we improved our product development speed, and we are working to use this new capacity to improve customer satisfaction.
